

FACTSHEET

# Document Conversion Management Suite

## ➔ CONVERSION SERVER FOR SAP® DMS AND SAP® PLM

The SAP document management system (DMS) allows files, drawings and other file-based documents to be managed including **structuring** and **version management**. For long term archiving, distribution and enterprise-wide usage, it is often necessary to perform conversion. SEAL Systems offers an SAP standard interface which determines conversion methods and starts conversion from many SAP processes.

The Document Conversion Management Suite from SEAL Systems controls this interface and performs the actual conversion. More than fifty input and output formats are supported. A dashboard enables simple administration and supervision of the conversion processes.

### ⋮ FEATURES

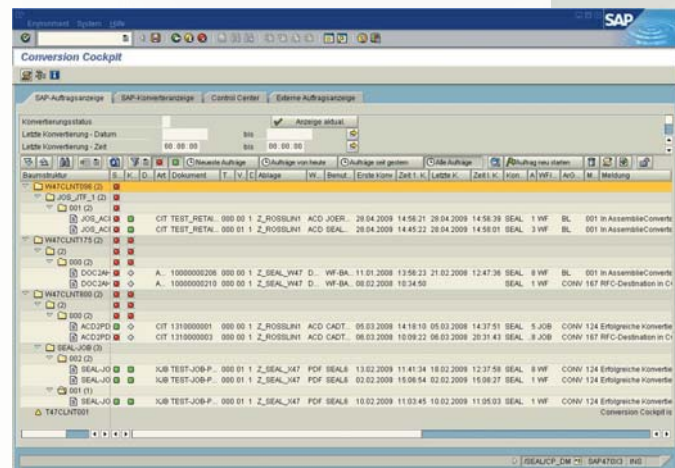

Configurable data retrieval for header updates, stamps/water marks and OLE field actualisations. Several originals or document structures can be compiled into one multi-page file. Business AddIns (BADI) enable flexible extensions. Parallel processing, load balance and fail-over enable high performance systems and fail-safe operation. Automatic location-related converter selection allows for the reduction of network load and the support of local content servers.

# Document Conversion Management Suite

## SEAL CONVERSION COCKPIT

SAP-integrated dashboard tool for the monitoring and administration of conversion jobs

- User, server or process orientated view
- Filter functions for status and other attributes
- Restart of conversions
- View conversion jobs
- View conversion servers
- View all processes of a conversion server (SEAL Control Center)
- View all steps of a conversion job (DPF Tracker)
- Set rights and roles for administrators and end users

No matter what the architecture, (distributed environments with several locations, multiple SAP systems and/or multiple SEAL conversion servers), the administration and help desk functions, can easily be undertaken.

## INTEGRATIONS

SAP standard methods of batch and workflow are supported. Server connection is via RFC.

## TECHNOLOGY

Conversion servers from SEAL Systems are implemented in Digital Process Factory (DPF) technology. Through the design and run time environment DPF enables the interactive design of conversion processes and an integrated tracking of conversion jobs. The processes become flexible, extendable, distributable and scalable.

## LICENSING

Die Document Conversion Management Suite contains a basic integration component for SAP and SEAL Control Conversion Cockpit. The DPF is installed on the external conversion server. All single input and output formats can be separately licensed according to requirements.

## INPUT FORMATS

**Office:** Microsoft Word, Excel, PowerPoint, MS Project, Outlook-Mail, Visio, ...

**CAD:** Autocad, Inventor, CATIA, Solid Works, Solid Edge, Microstation, UGS, Pro/E, ME10, ELCAD, Solid Designer, ...

**Publishing:** CorelDraw, FrameMaker, ...

**File formats:** TXT, HTML, GIF, JPEG, PostScript, PDF, TIFF, CGM, HPGL, BMP, ...

## OUTPUT FORMATS

PDF, PDF/A, TIFF, CGM, 2D/3D-CAD ...

SEAL Systems conversion servers for SAP DMS are fast, reliable and configurable. The basic technology can also be used for other SAP conversion methods. With more than 50 different application and file formats all requirements can be solved.

## SYSTEM REQUIREMENTS

SAP Release higher than 4.6 / Conversion Cockpit higher than 4.7 or ECC. Also a license of the original applications on the conversion server is necessary.

## CERTIFICATION

SAP Powered by NetWeaver

## OPTIONS

### Signaturer page

An additional page with release information and configurable DMS data is attached to the conversion result.

### Stamps and water marks

Configurable data retrieval for the setting of stamps and water marks.

### DMS XSA – Extended Search & Action

Enhanced document search for file types and start of mass or rerun conversions.

## RELATED PRODUCTS

### Document Conversion Suite for BC-XDC

Conversion server for the SAP Interface BC-XDC (Business Connector External Document Converter).

### PDF Longlife Suite

Check and conversion of PDF files according to the archiving standard PDF/A. With the integration into the SAP DMS for quality assurance of PDF/A documents.
