

PLOSSYS® netdome

SEAL Systems WEB Portal

■ Document Distribution via Internet

The SEAL Systems WEB Portal is an Intra/Extranet based distribution method for documents and drawings. The output is packaged as a unique browser viewable web page intended for the recipients and distributor only. The intended recipients can automatically be notified through e-mail with the unique link.

Within this page, the documents are displayed as thumbnails with any required meta data descriptions included. The originals (or specially prepared) documents may be opened through the thumbnails either individually or through a supplied group document link of the contents of the portal.

SEAL Systems WEB Portal

■ Usage

Distribution over the web with the WEB Portal is a secure dispatch method for larger file collections. Common obstacles such as e-mail quotas do not have an effect. The SEAL Systems WEB Portal is addressed by the

SEAL Systems document output management engines, gXnetplot and PLOSSYS®, as a standard printer queue. With the power of these managers, output of large and small format documents over the web is as easy as ever.

Naturally these processes include all the possible advantages of using SEAL Systems output managers, such as: the creation of a neutral long term file format, TIFF or PDF, from various applications and file stores; secure document branding with stamps and watermarks including status, revision level, date/time, user, system, etc.

■ File Creation through the Portal

- TIFF or PDF
- Progressive JPEG for thumbnails
- Associate files (without display, any file format)
- Index data
- File information

■ Download

- Via the browser
- Individually drawings/documents
- Complete portal in one documents

■ E-Mail Notification for Recipients

- Link to the created portal
- PLOSSYS® distribution methods available
- Possible limitation for list of recipients

■ E-Mail Notification for Distributor

- Portal creation and recipient notification confirmation
- Notification when recipients view the portal
- Any confirmation results are configurable

■ Product Code

Z-WP

■ Administration

- Password protected web based interface
- Sorted list of the existing portals
- Selective or data filter deletion
- Silent access of portals (notification mails not sent)
- E-mails for recipients or distributors

■ Security

- Secure-http (https) – optional
- Unique random coded URL
- PGP-security (downloads and e-mail)
- Limitation on number of recipients

■ Related Products

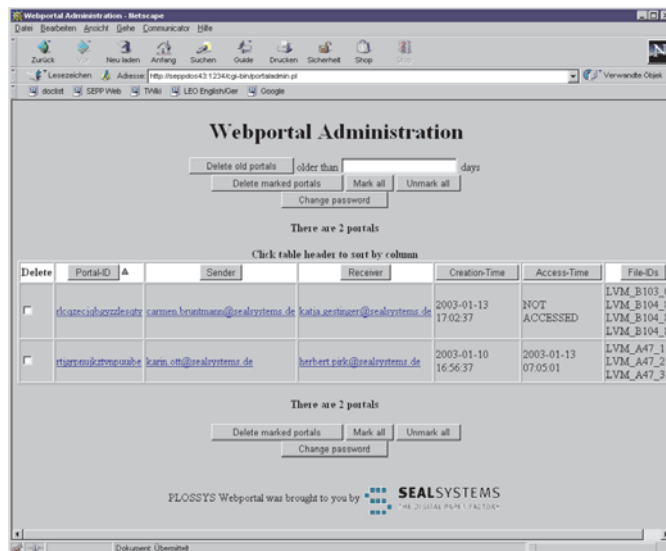

- Q-CD Output to an CD
- Q-EP Print-to-file driver

■ System Requirement

- SEAL Systems DOM solution:PGR/PGP/PGV/PGX or gXn
- Server: UNIX, NT/W2K/XP
- Browser: All current internet browser

■ Upload

- Local portal creation in the intranet, enterprise wide
- FTP upload onto a web server across the firewall

■ Integration and Scope

- As an output device for SEAL Systems document output management server
- As a stand alone process

■ Installation

Through SEAL Systems on a server. An Apache web server is included in the delivery.

■ Licensing

Per server
