

FACTSHEET

CMS Connect

Connection of Editing Systems to SAP systems

In order to make technical documentation generation even more efficient and fluent, SEAL Systems has, in cooperation with SAP, developed the product CMS Connect. This is a powerful bi-directional interface for the connection of editing and SAP systems. With this enhancement, it is now possible to use documents, meta data and structure information from the SAP system while editing in another system. Once complete, all meta data and document information can be transferred back into SAP.

What is CMS Connect?

CMS Connect (Content Management Connection) from SEAL Systems is a standardized interface for connecting all editing systems to SAP R/3. This enables the exchange of meta data and structure information between the editing and SAP systems in a bi-directional way.

What does CMS Connect do?

The exchange of data between editing and SAP systems can be done with CMS Connect. A deep integration of both systems must occur. The possible exchange data formats include:

- SAP bill of material and structure information
- SAP-administrated documents from SAP DMS or Archive Link
- Information of business processes (for instance customer order, production order...)

In addition, customer specific programs can be embedded in order to retrieve and exchange additional data or documents..

Who needs CMS Connect?

Every enterprise who uses a technical editing system or spare parts catalog system and needs SAP administrated data or documents during the editing process.

Advantages

- ⊕ Connection to any editing system or spare parts catalog system to SAP with a standardized interface.
- ⊕ Real time data, structures and documents available in the leading system with a press of a button or process-controlled.
- ⊕ Deep integration in PLM 7.0 also enables integration of editing works – similar to CAD systems.
- ⊕ SAP as a centralized system – also for editing and documentation generation.

CMS Connect

Object Identification:

- Material number
- Usage
- Document retrieval with pre-configured filters

Control of Bill of Material Dissolving:

- Validity
- Level of dissolving
- Change number
- Material status

Control of Document Relationship:

- Bill of material header
- Position type
- Object relationship
- Bill of material position

Installation

Installation is done with SAP Transports. The basic customizing is done using BC sets at the press of a button.

Configurable Userexits

If the extensive configuration possibilities are not enough and if customer-specific requirements are necessary, there are userexits available to enhance product functionality.

Filter Functions for Documents:

- Document type
- Document status
- Highest version
- Only released documents
- Delete duplicates
- Output control
- Creation of new documentation order
- Use existing documentation order
- Generation of documentation order with dialogue or with pre-settings
- Choose collection mode
- Start preview mode
- Display or immediate output of found document list

Scope of Delivery

The software is delivered as SAP Transport with a PDF document in both English and German providing practice examples.

Licensing

Based on the number of users of editing system.

System Requirements

The SAP versions ECC 6.0 or higher with Web Service support up to actual enhancement package.

See all details for recommended computer equipment under www.sealsystems.com/service-support/computer-equipment/

Related Products and

Options

- CMS Control (monitoring environment for CMS Connect)
- PPSAP Connector

Language Support

The product is fully unicode compatible and available in English and German language. Further languages on request.
