

FACTSHEET

Document Conversion Suite

Document Conversion Suite for BC-XDC

What is Conversion Suite for BC-XDC?

Significant company files can be administered within various modules of SAP architecture. For many business processes or daily operations, it is necessary to convert these documents into a universal format for the purpose of distribution or long term storage.

Was kann Conversion Suite for BC-XDC?

An SAP system is limited in its functionality to edit or print documents from external applications like Word, Excel, PowerPoint, CAD, etc or graphic formats like TIFF/G4 or PDF.

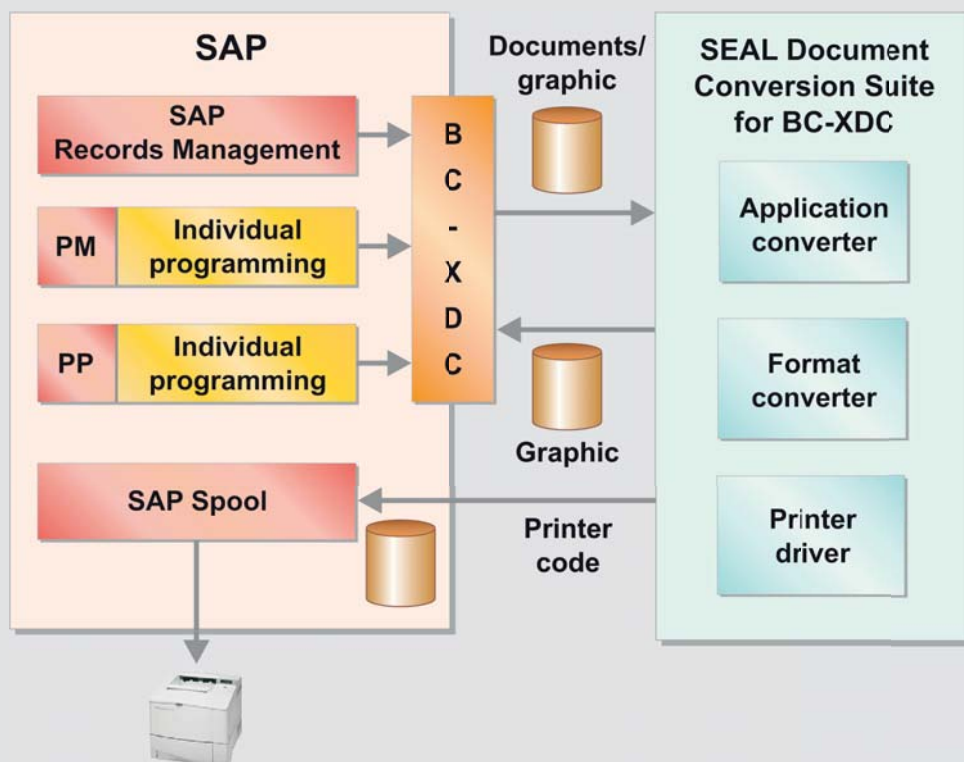

The method provided by SEAL for this requirement integrates within the BC-XDC (External Document Converter) interface.

The Document Conversion Suite for BC-XDC Includes a professional implementation of the interface with DPF technology from SEAL Systems

Who needs Conversion Suite for BC-XDC?

All SAP users, who want to processes, convert or output documents form other applications like Word, Excel, PowerPoint, CAD etc. or want to convert certain graphic formats as TIFF/G4 or PDF.

Conversion Suite for BC-XDC

Advantages at a glance

SEAL Systems has provided printing and conversion solutions for more than 30 years, becoming the market and technology leader in the industry with SAP NetWeaver® certified products.

The range of functionality for the BC-XDC implementation includes SAP Records Management, Conversion, Printing, and Composite Spool Requests. The solution supports 40+ files formats, ensuring a wide range of available input and output formats.

The certified version of the conversion service is implemented in the new DPF technology (Digital Process Factory®) from SEAL Systems. This provides simple installation, configuration and administering of conversion processes.

Input and output formats

Many input and output formats are supported, including all current Office, CAD and publishing applications, as well as more than 30 different graphic and text formats:

- Input file formats/Office: Word, Excel, PowerPoint, Visio, MS-Project
- Input file formats/CAD: AutoCAD, SOLIDWORKS, SOLIDEDGE,
- Inventor, UG, Catia, ME10, Pro/E
- Input file formats/Publishing: FrameMaker, Corel Draw,
- Input file formats/other: HPGL, HP-RTL, PDF, TIFF, PostScript, C907, CGM, more on request
- Output formats: PostScript, PCL, TIFF/G4, PDF,
- more on request

Application integration

The call or use of the interface out of SAP modules can be performed by two different methods:

- Individual programming:
Via BC-XDC e.x. print programs are enhanced by methods for document identification and conversion.
- SAP applications already consist of pre configured BC-XDC calls

The BC-XDC interface is commonly (WebAS 6.40 or higher) supported by SAP Records Management, to convert documents from electronic records into storage records or output.

Processing methods

Within the interface definition BC-XDC, two processing methods are described, in order to call the interface functions:

- Synchronized conversion of application and graphic formats
- Unsynchronized conversion with print output via the SAP spool system

Both methods are supported by SEAL Document Conversion Suite for BC-XDC.

Requirements

The interface is available for SAP WebAS Rel. 6.40 or higher (there are support packages available for older versions).
