

# FACTSHEET

## Extended Search & Action

### Search and management of SAP documents

#### What is „Extended Search & Action“ (DMS XSA)?

DMS XSA offers an alternative search function for SAP administered documents. In addition, DMS XSA can begin automatically or through an event, triggering further processing steps for searching documents.

With DMS Extended Search & Action it is possible, to define, trigger and supervise single or cycled processes for DMS documents.

Through different input and filter options, all relevant DMS documents can be identified. These document lists can then be edited, for example with conversion processes or export functions. Also, original files can be automatically processed or deleted.

#### What can DMS XSA Extended Search & Action do?

DMS XSA helps to identify the correct DMS files and correctly assigns them to corresponding processes. This enables an easy retrieval and editing of documents for a second conversion (for example, following conversion errors).

Another application case is the external data exchange, which includes data export to suppliers.

The tasks can be done as single processes or within a cycle. For conversion as a batch process the start and end time can be determined, which guarantees no disturbances of daily business through background actions.

#### Who needs DMS XSA Extended Search & Action?

All enterprises and administrators, who want to provide efficient maintenance for SAP DMS.

DMS XSA can also provide valuable services for productive conversion processes. For example, additional conversion cycles after an upgrade to a new data format or the retrieval and repetition of faulty conversions. At the migration of document data or when moving DMS documents within different SAP systems, DMS XSA also offers useful functionality.

### Advantages

- + Simple integration and configuration of processes
- + Integration in CV04n possible
- + Extendable functionality
- + Migration of documents between SAP systems

## Find documents in SAP and provide them for use in continuing processes ...

### Benefit

XSA supports administrators and users with an easy to use way for selecting documents with different methods and search criteria.

According to the requirements, different functions are offered for further processing of the search result list:

- Start conversions
- Insert conversions in batch mode
- Export of original files
- Deletion of original files
- Creation of a job file for DMS Loader
- Customer-specific processes can be flexibly configured

### Logging

Optional process logging through SAP application log with adjustable detail level. Additional viewing of conversion logs and of export process.

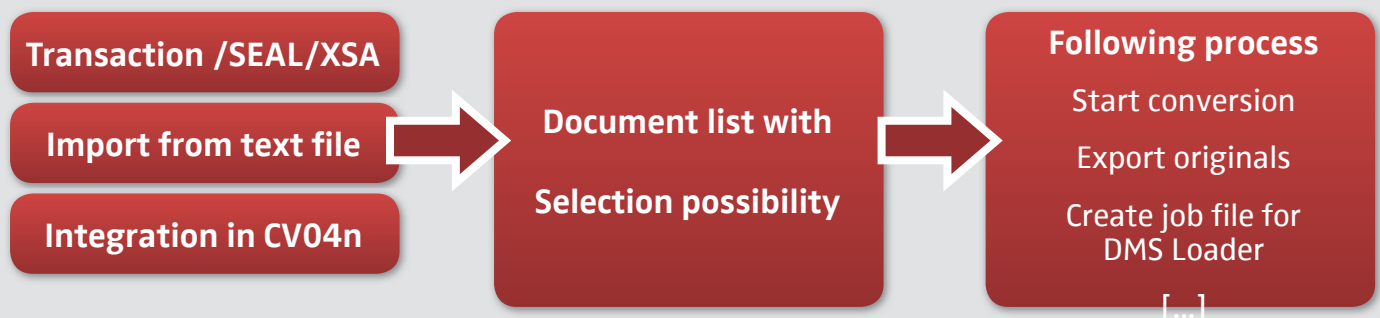

### Integration

- Individual Transaction /SEAL/XSA
- Call with SAP Transaction CV04N
- Batch processing
- Uses SAP rights management concept

### Flow chart: Editing of selected documents

By using the desired selection criteria the matching DMS documents are retrieved. After an intermediate dialogue with the possibility of manual editing of the result list the defined continuing process is started. This procedure can also run as an automatic background job.

## Functionality

- Extended document search
- Import of a document list from a csv file
- Conversion of original files – at once or later
- Export of original files – at once or later
- Deletion of original files
- Customer-specific, flexible extension of functions according requirements
- Configurable user-specific rights management

## Experts tip:

If the DMS documents are to be edited externally or a transfer to other systems is intended, then DMS Loader from SEAL Systems is a valuable help. DMS Loader can directly migrate DMS documents into any SAP system through a DMS XSA generated file. The products DMS XSA and DMS Loader are mutually synchronized and therefore offer an extended range of functions.

## Configurable User Exits

If the extensive configuration possibilities are not enough to transpose the customer-specific requirements, there are 16 different User exits available to enhance product functionality.

The screenshot displays the 'Document list after selection' window with 14 hits. A context menu is open over the list, highlighting 'Export of original files'. Below this, the 'Z60(1)/800 Export configuration' dialog is shown, with 'Target Folder' set to 'C:\temp\export'. The 'Execute' button in the main window is highlighted, and the 'Export' button in the configuration dialog is also highlighted.

**Document list after selection: 14 hits**

R	Ty.	Document	Vr	Part	User	Description	Status text	Change No.
	C..	10000000258	00	000	AD_S...	Scooter - Front part	Work request	
	C..	10000000259	00	000	AD_S...	Scooter - Axis	Released	
	C..	10000000260	00	000	AD_S...	Scooter - Running board	Released

# Extended Search & Action

## Installation

Installation is done through an SAP Transport. If required an RFC server is implemented for export of original files. The basic customization is done with the press of a button using BC Sets.

## Scope of Delivery

Software is delivered as SAP Transport with detailed documentation as PDF files in English and German language with practice examples.

## Systems Requirements

SAP versions higher than release ECC 6.0 with Enhancement package are supported.

## Language Support

The product is fully Unicode capable and available in English and German language.

Further languages can be delivered on request.

## Product Code

SP-DXSA

## Related Products and Options

- CAC-DMS Convert
- SP-LOAD DMS Loader

Adalbert Nübling and Debra Garls are specialist for your questions concerning:

*Provision and distribution of documents – Without any disadvantages*
