

PLOSSYS® netdome

Web Portal

What is SEAL Systems Web Portal?

SEAL Systems WEB Portal is an Intra/Extranet based distribution method for documents and drawings. The output is packaged as a unique browser viewable web page intended for the recipients and distributor only. The intended recipients can automatically be notified through e-mail with the unique link.

Within this page, the documents are displayed as thumbnails with any required meta data descriptions included. The originals (or specially prepared) documents may be opened through the thumbnails either individually or through a supplied group document link of the contents of the portal.

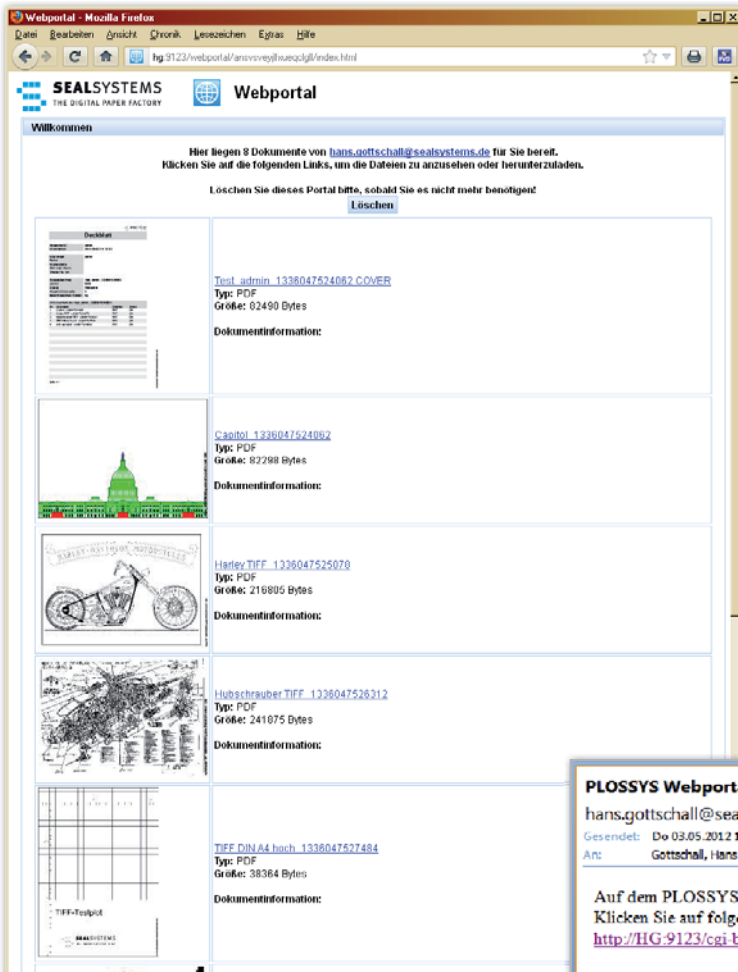

What does the SEAL Systems Web Portal?

Distribution over the web with the WEB Portal is a secure dispatch method for larger file collections. Common obstacles such as e-mail quotas do not have an effect this way.

Advantages

- Secure and clearly arranged distribution of larger document piles
- No limits for distribution like email quotas
- As simple as printing
- Easy output of large and small format documents
- Creation of standardized formats, like PDF, from various applications
- Secure document control through stamping of meta data

Web Portal
User view:

All documents, including thumbnails, are visible and can be downloaded by clicking on the file-name.

Web Portal Email notification:

Messages via emails can be generated as single or automatic task to recipients and/or sender of documents.

Features and Functions

File Creation through the Portal

- TIFF/PDF/native formats
- Associate files (without displays, any file format)
- Index data
- File information

Upload

- Local Portal in intranet
- FTP upload to web server beyond the fire wall

Download

- Via browser functions
- Single documents/files
- Complete portal in one document

Email notifications to recipient

- Link to the created portal
- PLOSSYS® distribution functions available
- Possible limitation of list of recipients

Email notificaitons to sender

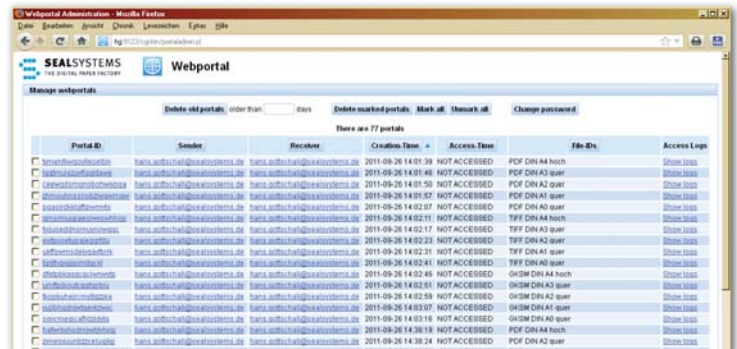

- Portal creation and recipient notification confirmation
- Notification when recipients view the portal
- Any confirmation results are configurable

Product Code

- PR-WP

Administration

- Web environment with password protection
- Sorted lists of existing portals
- Selective or data filter deletion
- Silent access of portals (notification emails are not sent)
- Emails to recipient or sender
