

FACTSHEET

SharePoint Conversion Suite

Conversion server for Microsoft SharePoint®

What is SharePoint?

SharePoint is a web application which covers several of the typical applications in a company or business.

In addition to other uses, for example, its document management functions can be used in order to realise content management. The contents and metadata are managed by the users and administrators. Individual search functions are made available to users. Managed via workflows, the documents go through the necessary interactive and automatic processing steps.

What does the SEAL Systems conversion server do for SharePoint?

Users of SharePoint can now use the well-known and efficient conversion server from SEAL Systems for **conversions**. For ad-hoc conversions, the corresponding features are available to you within your SharePoint libraries. Special workflow actions and **event receivers** are available for the triggering of processes out of workflows.

Who needs the SharePoint Conversion Suite?

SharePoint users require the SharePoint integration of the conversion server so that they are able to carry out interactive conversions to their documents within their SharePoint working environment.

On this basis, teamsite owners can therefore provide a uniform and centrally manageable conversion engine for all users and libraries.

Farm administrators can therefore provide an additional benefit within their farm on this basis.

Your advantages

- + Comprehensive control of data-by the user
- + Central data management by each user
- + Individual search functions
- + Interactive and automatic processing steps through workflows

SharePoint Conversion Suite

How does the SharePoint Conversion Suite work?

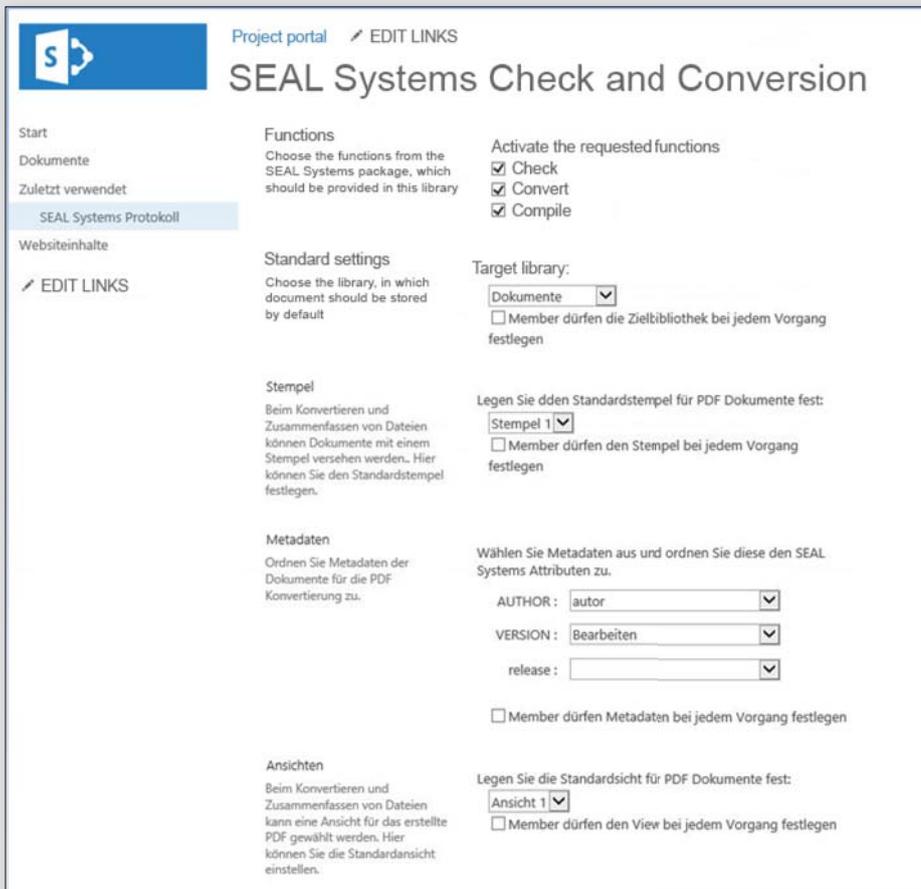

The actual conversion server in the tried and tested DPF technology is located outside the SharePoint server. This means that the SharePoint farm is only burdened with these additional features to a minimum degree.

The new features are provided within SharePoint by the farm administrator.

Property	Value
Name:	seal.sp15.srv.cps.wsp
Type:	Kernel solution
Contains web application resources:	No
Contains global assembly:	Yes
Contains code access regulations:	No
Provision server type:	Front-End-Webserver
Provision status:	Not provided
Provided for:	None

Teamsite owners are accordingly able to approve and configure the features for their users' libraries.

VERSION:

release:

Member dürfen Metadaten bei jedem Vorgang festlegen

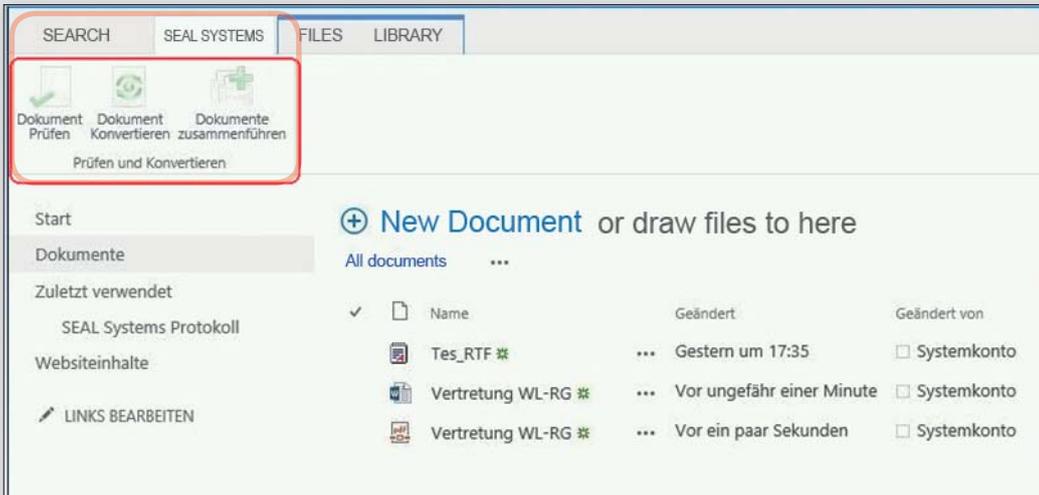

Ansichten
Beim Konvertieren und Zusammenfassen von Dateien kann eine Ansicht für das erstellte PDF gewählt werden. Hier können Sie die Standardansicht einstellen.

Legen Sie die Standardansicht für PDF Dokumente fest:

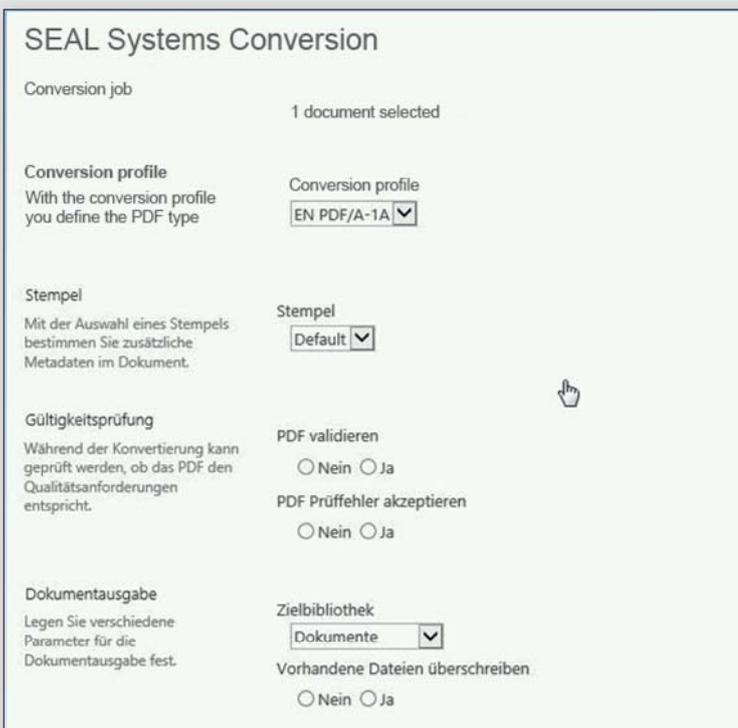

Member dürfen den View bei jedem Vorgang festlegen

SharePoint Conversion Suite

Users use the SEAL Systems conversion server following the selection of documents in their libraries by operating the appropriate buttons.

The conversion process can be parameterised by the user in the scope of the defined possibilities.

The process monitoring of the conversion workflow can be completed by key users and – if permitted – by users directly in the DPF Tracker.

SharePoint Conversion Suite

The components

The solution consists of a farm solution which is made available to the users as a feature through a standard deployment via the farm administrator and teamsiteOwner.

The DPF with the necessary workflows is located external to SharePoint.

These features communicate with the external DPF via web service.

Licensing

The licensing of the SharePoint integration takes place per site collection and according to the number of users.

The licensing of the DPF takes place according to inputs and outputs as well as additional functions for a calculator.

The licensing for a farm and a DPF with Office, Merge and PDFAdapt workflow is possible in the form of a package.

Functions

MS Office documents can be converted into PDF and PDF/A.

PDF files are subject to quality assurance, which means the testing and adaptation of the PDF in line with norms and company standards.

PDF files can be collated into a single complete document.

Benefits

SEAL Systems offers products and solutions for the user-friendly conversion of documents within the tried and tested SharePoint environment. Users can create digital paper from their documents on a straightforward, time-saving basis.

Farm Administrators can offer their customers an efficient solution for repetitive work. The installation and deployment can be realised quickly and without any upheavals.
