

## FACTSHEET

# PDF Longlife Suite – SAP® Integration

## Adaptation of PDF files according to the PDF/A standard

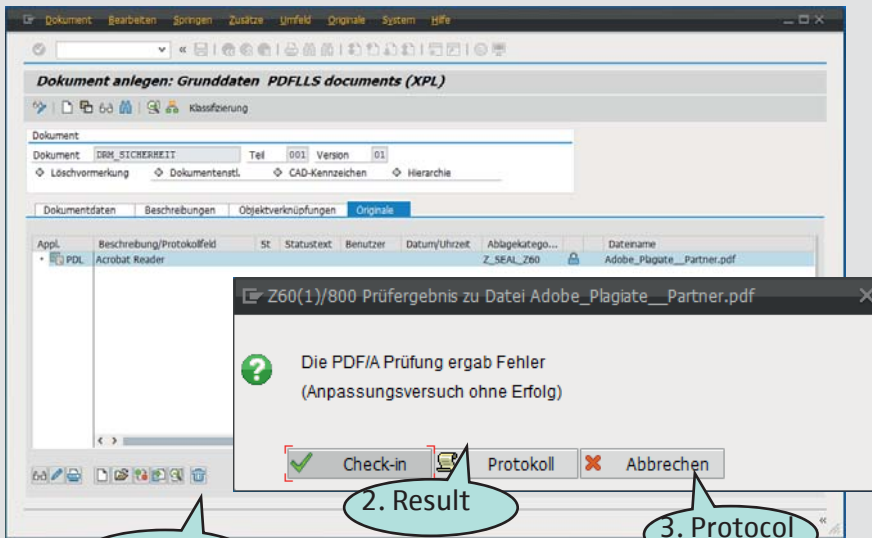

### What is PDF Longlife Suite SAP Integration?

The Adobe PDF reference defines a graphics language, which contains many functions. For using PDF as a format for long term archiving, the number of really used functions should be reasonably reduced to achieve a long term accessibility.

### What can PDF Longlife Suite SAP Integration do?

With the SAP DMS Integration of the PDF Longlife Suite, the methods for archiving a PDF file within SAP can be controlled.

### Advantages

- ⊕ Adaptation for secure longterm archiving
- ⊕ Complete control and supervision of the PDF creation process
- ⊕ Evaluation of existing data and during check-in

### “Proof at Check-in” Method

The check is controlled and triggered via user exit of the SAP checkin function module (BAPI). For configurable processes, the check can be activated and deactivated. Thus, multipass proofs or checks of data from secure sources can be avoided.

With this method, all PDF files are proofed, which were checked-in into SAP with the following methods:

- CV01 – CV02
- EasyDMS
- Conversions via SAP DMS conversion server
- DMS Loader from SEAL Systems
- Processes from third companies, who use the SAP standard BAPI check-in

### Check of existing data

According to preset configuration and the differences found in the PDF file the process generates

- a modified PDF file
- an error code
- a detailed error message file

The corrected files can be replaced or added to the appropriate Document Info Record. Altogether a log file is created about all checked files. This file can be used for statistics purposes.

A transaction for the interactive selection of documents, which are to be proofed and modified, can be added optionally (product code SP-XSA).

# PDF Longlife Suite – SAP® Integration

## System requirements

The integration is available for Microsoft Windows and some Unix systems. Also for SAP Version ECC 6.0 (or higher) with EHP.

The modules PDF Checker and PDF Adjust from SEAL Systems are necessary for check and correction and should be separately available (see „Related products“).

## Scope of delivery

- SAP integration on server. Server software is not included.
- SAP integration modules for BAPI CheckIn and stock data proof

## Product code

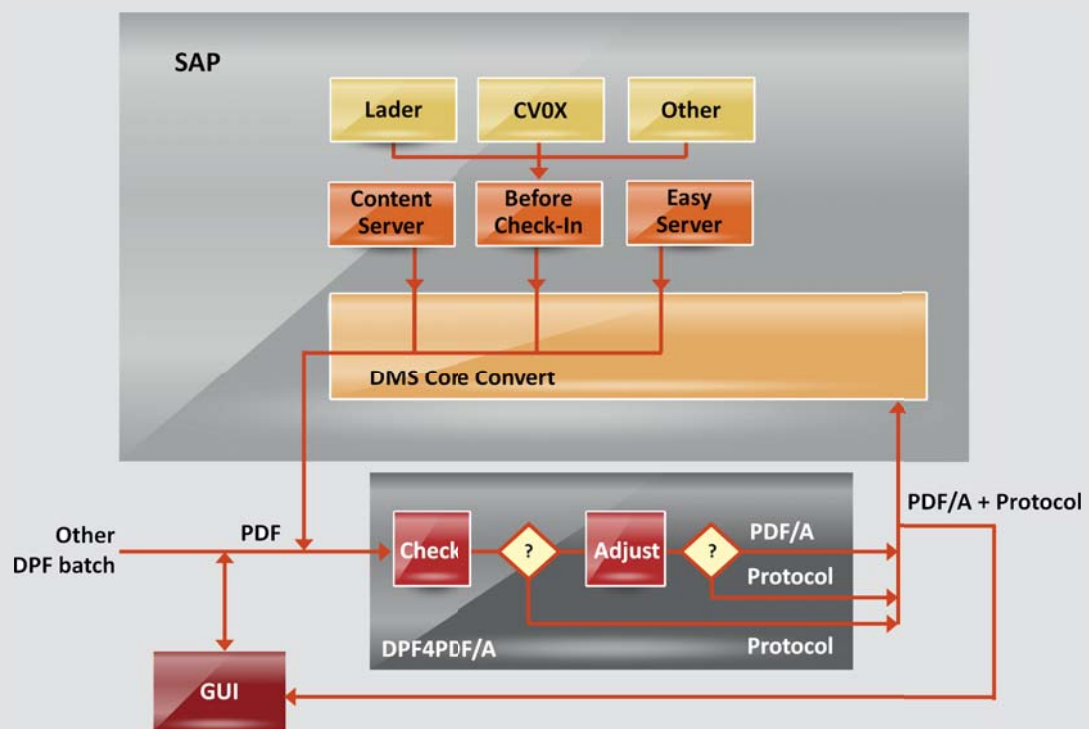

SP-LLSINT

## Licensing

Licensing is based on each application server, location and company without limitation of the number of users.

## Related products

- ConvertWIZ: PDF generation from all Windows applications
- DPF4Convert: Workflow controlled batch conversion of application data
- gXconvert: Conversion of many graphical, print and image formats
- PDF Checker: Check of generation standard rules
- PDF Adjust: Adjust to generation standard rules
- DMS-XSA: Selection, start and monitoring of stock data proof

Uwe Wächter and Debra Garls are specialist for your questions concerning:

*Conversion, PDF processing and system integration*

**Europe/Asia/Australia**
